

HendAxis Trust — Beta / UAT Execution Plan

Author: Senior QA Engineer, Software Test Manager & Django Specialist | **Duration:** 12–14 Days
| **Effort:** ~2h/day

EXECUTIVE MANDATE & SCOPE:

HendAxis Trust is an immutable double-entry escrow platform managing real financial value in Ghana. This plan details a structured, WhatsApp-coordinated 12-day User Acceptance Testing (UAT) regime covering 7 testing roles, Paystack Mobile Money/Card sandboxes, dual logistics (Courier vs Bus OTP), tiered inspection periods, dispute arbitration with item return reverse-OTPs, and non-dispatch penalty governance.

1. Testing Roles & Team Allocation Matrix

Testers are divided into specific operational roles to mirror authentic platform personas. Participants must strictly follow their assigned role permissions during testing sessions.

Role Persona	System Scope & Target Features	Min	Rec	Ideal	Safe Combine?
Role A: Consumer Buyer (Guest & Authenticated)	Checkout (/l/:id), MoMo payment, upfront OTP tracking (/track), inspection timers, 1-click release, 3-axis reviews.	3	5	8	■ No
Role B: Store Merchant (Social Commerce Seller)	Storefront (/store/:user), KYC upload, link creation, 1-click WhatsApp escrow generator, Paths A & B dispatch, wallet ledger, review replies.	2	4	6	■ No
Role C: Dispute Arbiter (Trust & Legal Arbiter)	Arbiter queue (tab=disputes), 360° dossiers, unified chat stream, 4 ruling types (Release, Full Refund, Partial Split, Item Return).	1	2	3	■■ With Role D
Role D: Compliance Officer (KYC & Risk Manager)	Ghana Card / Business License verification (tab=verifications), suspension appeals (tab=appeals), seller non-dispatch rates.	1	2	2	■■ With Role C
Role E: Finance Admin (Accountant & Ledger Auditor)	Double-entry ledger audit (tab=funds), system bank assets, platform revenue vs gateway fee expenses, arbiter payout batches.	1	1	2	■ No
Role F: Support Agent (Customer Helpdesk)	Transaction lookup (tab=transactions), buyer intelligence, notification center logs (/notifications), broadcast alerts.	1	2	2	■■ With Lead QA
Role G: Lead QA / Manager (WhatsApp Coordinator)	WhatsApp daily briefing, Celery time-shift triggers, mock webhook events, nightly database backups, defect triage.	1	1	1	■ Dedicated
TOTAL COHORT SIZE	Comprehensive multi-device & network coverage across Ghana	9	16	24	—

2. Detailed 12-Day Testing Schedule & Daily Role Matrix

Each testing day runs for approximately **2 hours per participant**. Testers receive daily WhatsApp prompts at 10:00 AM GMT.

Day 1 – Onboarding, Authentication, Security & KYC

Active Roles: Sellers (Heavy), Buyers (Moderate), Compliance (Heavy), Lead QA (Heavy)

Workflows: User registration, JWT HTTP-only cookies, 2FA TOTP setup, password recovery, Ghana Card KYC photo uploads, Compliance approval/rejection workflows in Admin Portal.	Key Risks to Watch: Unverified sellers claiming verified badge, token drops on tab switch, invalid Ghana Card format bypass.
Day 2 – Storefronts, Payment Links & 1-Click WhatsApp Escrow Workflows: Create links (GHS 150, 3.5k, 12k), dynamic fee calculations (Absorb vs Pass), 1-Click WhatsApp Escrow generator with prefilled parameters, embeddable JS badges.	Active Roles: Sellers (Heavy), Buyers (Moderate), Lead QA (Moderate) Key Risks to Watch: Fee math rounding errors, suspended sellers generating active links, XSS injection in description.
Day 3 – Public Checkout, Paystack MoMo Sandboxes & Auth Modes Workflows: Guest checkout with post-payment account creation; Authenticated buyer 1-Click Zero-OTP checkout; Sandbox MTN, Telecel, AT MoMo & test cards.	Active Roles: Buyers (Heavy), Sellers (Light), Lead QA (Heavy) Key Risks to Watch: Double transactions from duplicate webhooks, page reload dropping order state, guest unable to track.
Day 4 – Dual Logistics Verification & Upfront OTP Tracking Workflows: Path A (Courier tracking + waybill WebP) and Path B (Informal Bus with driver phone/car #/station + waybill photo); Upfront 6-digit OTP tracking portal (/track).	Active Roles: Sellers (Heavy), Buyers (Heavy), Lead QA (Moderate) Key Risks to Watch: Bus dispatch failing to generate secret OTP, tracking OTP rate-limit bypass, sensitive seller payout leak.
Day 5 – Tiered Inspection Periods, 1-Click Release & Reviews Workflows: Delivery confirmation handoff; Tiered inspection countdowns (24h for <2k, 48h for 2k-10k, 72h for >=10k); 1-Click escrow payout release; 3-axis verified review.	Active Roles: Buyers (Heavy), Sellers (Moderate), Finance Admin (Light) Key Risks to Watch: Wrong inspection tier assigned, unauthenticated review posting, double-clicking release causing double payout.
Day 6 – Dispute Resolution Engine, 5-Photo Trail & Retraction Workflows: Buyer raises dispute with category + 2 photos; Subsequent dialogue append (--- [Update] ---); Seller defense; Unified chat timeline; 360° dossiers; Dispute retraction.	Active Roles: Buyers (Heavy), Sellers (Heavy), Arbiters (Heavy) Key Risks to Watch: Uploading >5 photos per party, images >1MB breaking layout, review stars still showing during dispute.
Day 7 – Item Return Subsystem, Reverse Pickup OTP & Rulings Workflows: Execute 4 rulings (Release, Full Refund, Partial Split, Require Return); Buyer dispatches return via bus; 6-digit Reverse OTP verification; Auto-refund timeout.	Active Roles: Arbiters (Heavy), Buyers (Moderate), Sellers (Moderate), Finance (Light) Key Risks to Watch: Unallocated split funds in partial refund leaking out of ledger, Reverse OTP bypass, return timeout failure.
Day 8 – Seller Health Governance, Non-Dispatch Expiries & Appeals Workflows: Celery 4-day non-dispatch timeout trigger; Non-dispatch default penalty deduction; Auto-suspension threshold (>35% default rate); Suspension appeals desk review & clean-slate.	Active Roles: Sellers (Heavy), Compliance (Heavy), Lead QA (Heavy) Key Risks to Watch: In-flight orders blocked during suspension, reinstated sellers immediately re-suspended, penalty miscalculation.
Day 9 – Double-Entry Financial Ledger & Payout Mode Audits	Active Roles: Finance Admins (Heavy), Sellers (Moderate), Arbiters (Light)

Workflows: Audit balance sheet invariant (Assets = Liabilities + Equity); Instant vs Manual withdrawal modes; Bank account name verification; Arbiter payout batch creation.	Key Risks to Watch: Unbalanced ledger entries (orphan rows), double-withdrawal race condition, negative wallet balances.
Day 10 – Promotions, Referral Engine, Cashback & Directory Workflows: Double-sided referral link rewards (GHS 15 referrer / GHS 10 referee); Promo code fee floor safeguards; Seller payout protection rule; Ballpark multi-token store search.	Active Roles: Buyers (Heavy), Sellers (Heavy), Lead QA (Moderate) Key Risks to Watch: Promo codes deducting from seller merchandise earnings, self-referral bypass, referral rewards on disputed orders.
Day 11 – Edge Cases, Concurrency, Interruption & Security Workflows: Simultaneous release vs dispute race conditions; Double-click button submissions; Network drop during MoMo; Browser back-button navigation; Privilege escalation checks; Mobile UI.	Active Roles: All Roles (Heavy), Lead QA (Heavy Orchestration) Key Risks to Watch: HTTP 500 unhandled exceptions, database deadlock, infinite loading spinners on token expiry.
Day 12 – End-to-End Regression, Bug Retesting & Sign-Off Workflows: Retest all resolved tickets in Ready for Retest queue; Complete one pristine multi-role golden path transaction; Audit Exit Criteria metrics; Sign UAT Acceptance Certificate.	Active Roles: All Roles (Full Participation) Key Risks to Watch: Regression defects from hotfixes, unverified bug closures, unresolved Critical/High tickets.

3. Bug Reporting Structure & Severity Classification

Testers report quick alerts via WhatsApp and submit structured records to the formal tracker. Severity levels guide developer hotfix SLAs:

Severity	Non-Technical Definition	Platform Example	Fix SLA
■ Critical	System crash, financial loss, ledger imbalance, security leak.	Double-payout on release; MoMo charged but order missing.	< 4 Hours
■ High	Core workflow blocked with no workaround.	Seller cannot submit dispatch waybill; tracking OTP not sending.	< 12 Hours
■ Medium	Feature functions incorrectly but workaround exists.	Review star rating off by 1; search filter pill misaligned.	< 24 Hours
■ Low	Minor functional glitch or wording ambiguity.	Unclear error message tooltip; secondary button wrapping.	< 48 Hours
■ Cosmetic	Visual styling, dark mode contrast, typo.	Spelling typo in FAQ; banner padding mismatch on mobile.	Next Sprint

4. Production Launch Exit Criteria (Quality Gate)

Quality Dimension	Acceptable Threshold for Production	Gatekeeper Status
Critical Severity Bugs	0 Open (Zero Tolerance)	■ Strict Blocker
High Severity Bugs	0 Open (Zero Tolerance on Financial/Auth)	■ Strict Blocker
Double-Entry Ledger Imbalance	GHS 0.00 (Zero math discrepancy)	■ Strict Blocker
Core Workflow Success Rate	≥ 98.5% Completion across all scenarios	■ Strict Blocker
Medium Severity Bugs	≤ 2 Open (With documented low-impact workaround)	■ Acceptable
Low / Cosmetic Issues	≤ 5 Open (Scheduled for post-launch sprint)	■ Acceptable
